WATER MANAGEMENT POLICY

Water is so essential for life that it's simply impossible to imagine life without water. India has 16% of the world's population and only 4% of the world's water resources are available for use, and that too are depleting rapidly. The demand for water is expected to grow from 40 billion cubic metres (bcm) currently to around 220 bcm in 2025. The uneconomical and unethical use of water by human beings is the sole reason for the exploitation and deterioration of this valuable natural resource. Thus, both quality and quantity of water are at stake and need to be taken care of. It's the moral duty and social responsibility of each individual and community as a whole to contribute to conserve water and rejuvenate the water resources.

In this direction, our college has made efforts to ensure water conservation by implementing the following steps:

- To acquire the knowledge of Water conservation.
- Trained to Water Sharing
- Controlled Water Usage
- Practising the Drainage management
- To be Environmental Friendly and Protective
- To Avoid leakage of water from the taps
- Practicing to turn the tap off when not in use
- Regularly check the leakage of water in the toilets.
- To Educate people to save the water
- To stop throwing the water unnecessarily on roads, instead this can be used for gardening and cleaning.
